# COSC 1336 – Fundamentals of Programming
# Project #7 - Create Identity

Overview

Write a Python program for a hospital employee registration system. The program will ask the user to enter the employee's first name, last name, Social Security Number (SSN), number of emergency contacts, hourly wage, and employee badge ID.

The program will then generate and display the following information:

1. Employee initials
    - First letter of the first name + first letter of the last name
2. Employee email address in the format:
    - <first initial><lastname>@cityhospital.com

    Example:
    - Maria Lopez → mlopez@cityhospital.com
3. The last 4 digits of the employee's SSN
4. Hourly wage formatted with:
    - A dollar sign ($)
    - Two decimal places
5. Validation that the number of emergency contacts is between 0 and 5 inclusive
6. Employee badge username using:
    - Last name
    - A period (.)
    - Last 4 digits of SSN

    Example:
    - Lopez.6789

---

Functional Requirements

Your program must use functions and include the following required functions:

- getStringData()
    - Validates and returns a non-empty string from the user
- getFloatData()
    - Validates that the hourly wage is greater than 0
- getIntegerData()
    - Validates that the number of emergency contacts is between 0 and 5 inclusive
- displayResult()
    - Accepts the required values and displays all formatted employee information
- validateSSN()
    - Validates the SSN format: xxx-xx-xxxx
    - Returns TRUE if valid and FALSE if invalid
    - If invalid, the user must be prompted again
- main()
    - Controls the overall program flow

---

Optional Enhancements

- Verify that the SSN contains exactly 9 numeric digits
- Allow the hospital email domain to be stored as a constant variable

---

Programming Style Requirements

- Use meaningful variable names
- Follow proper code formatting practices
- Include comments at the beginning of the program and before each function
- Use professional programming style throughout the project

---

**COSC 1336 – Fundamentals of Programming**
**Project #7 - Create Identity**

**Sample Run #1**

```
Enter employee first name: Maria
Enter employee last name: Lopez
Enter Social Security Number: 123-45-6789
Enter number of emergency contacts: 2
Enter hourly wage: 28.75
Enter employee badge ID: EMP204

----------------------------------------
Employee Registration Summary
----------------------------------------

Employee Initials: ML
Employee Email: mlopez@cityhospital.com
Last 4 Digits of SSN: 6789
Hourly Wage: $28.75
Emergency Contacts: 2
Badge Username: Lopez.6789
```

---

**Sample Run #2**

```
Enter employee first name: David
Enter employee last name: Carter
Enter Social Security Number: 123456789

ERROR: Invalid SSN format.
Please enter the SSN in xxx-xx-xxxx format.

Enter Social Security Number: 555-22-9811
Enter number of emergency contacts: 1
Enter hourly wage: 35.50
Enter employee badge ID: EMP115

----------------------------------------
Employee Registration Summary
----------------------------------------

Employee Initials: DC
Employee Email: dcarter@cityhospital.com
Last 4 Digits of SSN: 9811
Hourly Wage: $35.50
Emergency Contacts: 1
Badge Username: Carter.9811
```
